(57) **ABSTRACT**

In some embodiments, a mobile media device enclosure can include: (a) an enclosure having an interior, an exterior, a top side, a bottom side, a right side, and a left side, the interior configured to form a cavity, the cavity is sized to retain a mobile media device therein; (b) a vertical boundary, the vertical boundary having a substantially vertical orientation and configured to substantially bisect the mobile media device enclosure from the top side to the bottom side; and (c) a horizontal boundary, the horizontal boundary having a substantially horizontal orientation and configured to substantially bisect the mobile media device enclosure from the left side to the right side. The vertical boundary and the horizontal boundary are further configured to substantially divide the mobile media device enclosure into four sections. Each of the four sections is elastically coupled to two other sections of the four sections. Other embodiments and related methods are also disclosed herein.
